AVCE Media Production & Communication	A
A Level History	C

## Employment History

**Kingston University (Computing, Information Systems & Mathematics (CISM) Faculty) Spring 2007**  
Student Ambassador on Open Days

I was selected by Kingston University to represent the CISM Faculty at various Open Days throughout Spring 2007. My duties included helping staff organise the faculty stand and then provide insights and answering questions to prospective applicants to the faculty about the university and course, as well as escort visitors around the building to where they needed to go.

**The CAD Workshop Ltd, Torquay November 2002 – September 2005**

IT & General Office Assistant

My duties involved organising and filing letters and catalogues, computer maintenance of the office machines, supervising the office while other employees were absent, dealing with clients and money, looking after the Internet Café section of the office and helping customers and sorting out charges. This experience helped to build my confidence, especially around the general public and helped me improve my customer service skills with customers and clients at the company.

**Westlands School Computer Network Dept. Torquay July 2004**

Two Week Work Placement

My duties included looking after a specific room of networked computers, making network cables, basic computer maintenance repair and filing information and software CD's in the main office, while providing basic support to users with problems. During my time spent here, I learned how to improve my organisation skills while working in a small team of technicians. I was also given specific delegated tasks which helped to develop my time keeping skills and work to a deadline, while liaising with the rest of the team on their tasks and projects.

## Technical Experience

Computer applications which I have a good understanding in are Microsoft Office, Adobe Photoshop, Adobe Premiere, Macromedia Dreamweaver and SQL Server. I am currently learning Macromedia Flash and Adobe After Effects and Microsoft Visual Studio. Programming languages which I am fluent in are XHTML, XML, CSS and SQL. Languages which I am currently learning are ASP.net, VB.net, Java, JavaScript, PHP and XSLT. I have a wide range of knowledge regarding hardware, from building my own home computer to building several wired and wireless networks as well as diagnosing and repairing faults.

## Interests

I am interested in new developments in technology and the media as well as the overall technical aspects of television and DTT, to increase my knowledge and help keep me familiar with current and new advances. I also like to keep track of current affairs as I am interested in news events happening in the world around me. In my spare time I enjoy digital photography and videography because I like capturing events and moments on record. I like travelling and exploring new places to broaden my knowledge and interest in other regions in the UK as well as other countries such as North America and Asia.
